PROFESSIONAL SUMMARY

Data Science & Analytics student at Seneca Polytechnic who builds and ships working systems. Hands-on experience packaging multi-service applications into isolated, reproducible Docker environments that start with one command, deploying containers to AWS with Terraform, launching and maintaining live websites (HTML/CSS/JavaScript, Next.js, WordPress), and building an agentic LLM pipeline on the Claude API. Comfortable with Windows and macOS troubleshooting and clear setup documentation.

EDUCATION

Seneca Polytechnic

Toronto, ON

Honours Bachelor of Data Science and Analytics (currently enrolled)

Sep 2024 – Apr 2028 (Expected)

- GPA 3.9/4.0; President's Honour List (Winter 2026)
- **Relevant coursework:** Security, Privacy & Ethics in Data; High Performance Computing; Advanced Database Design

TECHNICAL SKILLS

Systems & Environments: Windows 10/11, macOS, Docker, Docker Compose, service health checks, Git, GitHub

Web: HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, WordPress, Vercel

Cloud & DevOps: AWS (ECS Fargate, RDS, S3, ECR), Terraform, GitHub Actions CI/CD

AI & Automation: Claude API, LLM agent pipelines, Google Apps Script, Power Automate, Make

Languages & Data: Python, SQL, PostgreSQL, Supabase

IT Support: Technical troubleshooting, hardware and software support, access issue resolution, technical documentation

EXPERIENCE

QuickRN Canada

Remote

Web Development & Data Operations

Jul 2025 – Present

- Built and deployed three production websites from concept to launch (see Projects) and maintain them after release.
- Maintain and update the public WordPress site so course pages and content stay accurate, accessible, and current.
- Resolve website and online-course access issues, document each fix, and explain resolutions to users by email.
- Built Aspen OS solo: an internal Next.js, TypeScript, and Supabase platform on Vercel for tasks, kanban, and documentation, used daily by the team and shaped with non-technical staff.

CV. Veda Sakti Dharma

Jakarta, Indonesia

Software Engineering Intern

Jun 2025 – Aug 2025

- Developed and tested a Python application that automated PPh 21 income tax calculations and payslip generation; debugged issues and validated payroll data for accurate reporting.

PROJECTS

Streaming Clickstream Pipeline | Docker Compose, Kafka, Spark, MinIO, Streamlit

[GitHub](#)

- Packaged a seven-service streaming platform into a single Docker Compose environment that starts with one command, with health checks and persistent volumes on every service so the demo comes up the same way on any machine.
- Wrote Docker smoke tests for service health and the end-to-end pipeline, run in GitHub Actions CI within a 74-test suite.
- Built a Streamlit Pipeline Health page that checks each service over HTTP and flags stale data, so anyone viewing the demo can confirm the system is actually running.

Production Websites | HTML, CSS, JavaScript, Next.js

[Portfolio](#)

- [deltaharvestfestival.ca](#): heritage festival site with a live countdown, programme, venue map, and a Tickets call-to-action.
- [eoperformancecollective.ca](#): Next.js static site for an arts collective with a Become a Member call-to-action in the hero.
- [nelcoloma-moya.ca](#): academic portfolio with Download CV and contact-form calls-to-action for a Seneca instructor.

FraudLens | FastAPI, PostgreSQL, Docker, AWS ECS Fargate, Terraform

[GitHub](#)

- Containerized a FastAPI service and Streamlit dashboard (multi-stage, non-root builds) on AWS ECS Fargate with RDS and S3.
- Provisioned the infrastructure with Terraform, deployed via GitHub Actions with OIDC, and added health and readiness endpoints, backed by 139 Python tests.

IDX Stock Scanner Agent | Python, Claude API, XGBoost, Parquet

[GitHub](#)

- Built a daily agentic pipeline (fetch, validate, rules, ML ranking, LLM explanation) where an ExplainAgent sends each candidate's signals to the Claude API for a plain-language rationale, behind rule-based guardrails.
