PROFESSIONAL SUMMARY

Data Science and Analytics student (3.9 GPA) who builds with data, not just studies it: integrating API and file sources into tested PostgreSQL warehouses, automating the pipelines that refresh them, and delivering Power BI and SQL reporting. Built Aspen OS, the project-management platform QuickRN runs on daily, and resolve user inquiries and access issues.

EDUCATION

Seneca Polytechnic

Toronto, ON

Honours Bachelor of Data Science and Analytics

Sep 2024 – Apr 2028 (Expected)

- **Cumulative GPA: 3.9 / 4.0** | President's Honour List (Winter 2026) | SSF International Student Merit Award
- **Relevant Coursework:** Business Intelligence I, Data Visualization, Advanced Database Design, Security/Privacy/Ethics: Data

TECHNICAL SKILLS

Languages: Python (pandas), SQL, TypeScript, JavaScript, R

BI & Visualization: Power BI (DAX, PBIP/TMDL semantic models), Tableau (coursework), Microsoft Excel, Streamlit

Data Integration & Automation: REST/CKAN APIs, ETL/ELT, Apache Airflow, dbt, Google Apps Script, GitHub Actions CI

Databases & Tools: PostgreSQL, PostGIS, Supabase, MySQL, Docker, Git/GitHub, pytest, Microsoft Office, SharePoint

PROJECTS

Toronto Mobility Intelligence | Python, PostgreSQL, PostGIS, Power BI, Docker, pytest

Analytics Platform

- Built a reproducible platform that pulls four City of Toronto Open Data datasets through the CKAN API into a three-layer PostgreSQL warehouse (staging → clean → analytics) modeled as a documented star schema.
- Wrote Python ETL with schema-drift detection and validation that logs every excluded row with a reason; ingested 20,691 records with 91 passing tests.
- Designed 19 SQL analytics files feeding a 4-page Power BI dashboard whose 18 DAX measures mirror the SQL exactly.

Aspen OS | Next.js, TypeScript, Supabase (PostgreSQL), Vercel

In Production at QuickRN

- Built solo an internal project operating system (tasks, Kanban, timelines, documentation) that the team uses daily.
- Designed the relational data model with role-based workspace membership enforced by Supabase row-level security; shipped task dependencies, a Gantt timeline, and an audit-logged activity feed.

Retail Sales ETL Pipeline | Python, Apache Airflow, PostgreSQL, Docker, GitHub Actions

Data Pipeline

- Automated an Airflow pipeline (extract → validate → transform → load → quality check) loading real retail transactions into a PostgreSQL star schema, with idempotent reruns and CI tests.
- Added schema, null, duplicate, and referential-integrity checks; the load watermark advances only after warehouse checks pass.

EXPERIENCE

Web Development & Data Operations

Jul 2025 – Present

QuickRN Canada

Remote

- Resolve website and online course access issues and answer user inquiries by email, documenting each resolution; manage exam-prep content data and WordPress site content.
- Built three production websites and Aspen OS end to end, gathering requirements from non-technical staff and maintaining them after launch.

Career Peer

Sep 2026 – Present

Seneca Works, Seneca Polytechnic

Toronto, ON

- Support students and alumni with resume reviews, job-board access, and career resources; maintain records in SharePoint.

IT & Media Strategy Associate

Aug 2025 – Sep 2026

PERMIKA Toronto

Toronto, ON

- Built event-management and member-engagement tools; led a team of ten on the League of Toronto 2026 media campaign.

Software Engineering Intern

Jun 2025 – Aug 2025

CV. Veda Sakti Dharma

Jakarta, Indonesia

- Developed and tested a Python application that automates PPh 21 payroll tax calculations and payslips; validated and organized payroll data to make reporting more efficient.
