PROFESSIONAL SUMMARY

Data Science & Analytics student (3.9/4.0 GPA) who ships web software instead of only studying it. Built and deployed **Aspen OS**, a full-stack Next.js and TypeScript platform a nonprofit team uses daily, then profiled it in production and cut its initial JavaScript by 21% and prefetch-driven server work by about 60%. Also build framework-free JavaScript client sites and own features from scoping through production.

EDUCATION

Seneca Polytechnic

Honours Bachelor of Data Science and Analytics (GPA 3.9/4.0)

Toronto, ON
Expected Apr 2028

- President's Honour List (Winter 2026); SSF International Student Merit Award recipient
- **Relevant coursework:** Intro to Algorithms and Data, Advanced Database Design, High Performance Computing

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML, CSS

Frontend: React, Next.js (App Router, Server Components), Tailwind CSS, shadcn/ui, responsive design

Backend & Data: Supabase (PostgreSQL, Auth, Realtime, Storage), PostgreSQL, server actions, FastAPI, pandas

Testing & Tooling: Playwright, ESLint, Prettier, Git, GitHub Actions, Vercel, Sentry, Docker, VS Code

PROJECTS

Aspen OS – Full-Stack Project Management Platform

aspen-os.vercel.app

Next.js (App Router) · TypeScript · Tailwind CSS · shadcn/ui · Supabase · Playwright · Vercel

github.com/suryalionael/aspen-os

- Built solo and deployed a workspace platform for a nonprofit team at QuickRN: kanban boards, calendar, notes, activity feed, dashboard, comments, and file attachments, backed by Supabase Auth, Postgres row-level security, and realtime subscriptions.
- Implemented drag-and-drop kanban with a keyboard fallback and calendar drag-to-reschedule, and covered the main flows (kanban, calendar, notes, dashboard, project management) with Playwright end-to-end tests.
- Profiled production with Playwright tracing, V8 code coverage, and the React profiler; lazy-loaded Sentry Replay and moved the Supabase SDK to dynamic imports, cutting project-page First Load JS from 307 KB to 243 KB (–21%).
- Reduced Server Component prefetch requests per page load from 7–8 to 3 and cumulative server render work from ~2.7 s to ~1 s; parallelized layout queries, deduplicated data fetching with React.cache, and added Suspense skeletons to slow pages.
- Kept server-verified auth in middleware after measuring its ~130 ms cost, and corrected overstated numbers from an earlier audit in a written report.

Client Websites – Training Centre, Heritage Festival, Academic Portfolio

lionael-portfolio.vercel.app

HTML · CSS · JavaScript (no framework) · Responsive design · GitHub Pages

- Built three responsive sites in plain JavaScript, HTML, and CSS with no build step: a vocational training centre, a two-day heritage festival (programme, venue histories, ticketing), and an academic portfolio (biography, teaching, research, publications). Handled content structure through deployment, including a heritage logo system for the festival.

IDX Stock Scanner – Rules → ML → LLM Decision-Support Pipeline

github.com/suryalionael/idx-stock-scanner-agent

Python · XGBoost · Claude API · yfinance · Streamlit

- Built a daily scanner for Indonesian equities: a data validator and 24 indicator features feed a rule-based signal engine, an XGBoost ranker, and Claude-written explanations, with a Streamlit dashboard and automated tests. Framed as decision support with guardrails ahead of the model, not a promise of returns.

EXPERIENCE

QuickRN Canada

Remote

Web Developer & Data Operations

Jul 2025 – Present

- Shipped three production websites and the Aspen OS internal platform, working with non-technical stakeholders to turn requirements into features, then maintained them after launch.
- Maintained WordPress content, resolved website and online-course access issues through troubleshooting, and documented fixes for customer email inquiries.

PERMIKA Toronto

Toronto, ON

IT & Media Strategy Associate

Aug 2025 – Sep 2026

- Built and maintained internal tools for event management and member engagement; led the League of Toronto 2026 social media campaign with a team of ten.

CV. Veda Sakti Dharma

Jakarta, Indonesia

Software Engineering Intern

Jun 2025 – Aug 2025

- Developed and tested a Python payroll tax (PPH 21) application that automated employee tax calculations and payslips; validated payroll data to catch errors before reporting.
